

MULTI-COLOR BRUSH HANDLE

ABSTRACT OF THE DISCLOSURE

A cosmetic brush has a multi-colored brush handle that contains various chambers that are capable of receiving a colored material. The colored material can be a colored epoxy resin, a colored pipette, or combinations thereof. The brush handle can be made of polystyrene so that the brush handle is transparent, which allows the colored material to be seen through the handle. A single chamber can be divided into a plurality of segments with each segment containing a different colored material therein. Various geometric cross-sectional areas can be used for the chamber. Additional colors can be added to the brush handle by increasing the number of chambers or segments within a single chamber within the brush handle.
